

WEATHERTUFF™

GLAZE COAT

Transparent Water repellent coat for exterior & interior applications

ADVANTAGES:

- For Glaze or Shining finish of any exterior coated surface and to reduce dust collection, apply GLAZE COAT.
- It seals the porosity of cement plaster, stones & makes it moderate water repellent.
- It is transparent and moderately U.V. resistant
- Can be applied over stone to get better protection against algae & fungus.
- Flexible film of GLAZE COAT gives protection against minor structural movements.
- We recommend to apply GLAZE COAT as topcoat to INSULTEC coatings for better heat re-radiation and avoid dust collection.

HOW TO APPLY:

- Clean the surface thoroughly & make it free from loose dust & oil.
- Wash the surface with water.
- Apply the first coat of GLAZE COAT by brush or spray.
- Let the first coat dry for 2-3 hours. Then apply another coat of GLAZE COAT.
- Make sure no dust layer is formed between surface of each coat.
- Two coats are necessary for better results.

Coverage : On smooth surface, 1 litre. GLAZE COAT

Covers 70 to 80 sq.ft. in 2 coats.
